FOREWORD

This Report is a statistical summary of the recorded use of Saskatchewan Park lands for the 1990 summer operating season including the period May 17 (Victoria Day Weekend) to September 3 (Labour Day Weekend) inclusive. Park user data for the remaining period (shoulder season/winter season) will be summarized in a Shoulder season report to be published in July 1991.

The data in this Report detail user statistic information in four main areas:

1. Park System Use - Visitation to the Provincial park system is estimated through the use of two main indicators: traffic counter data and entry permit data;

2. Camping - Campground usage is provided through permit sale analysis, and through estimates based on self-registration revenue figures;

3. Programs - Park and Recreation program information is collected through direct counts by Park Visitation Staff, Parks Branch; and

4. Miscellaneous data - including golf, cottage and commercial lease data collected by record sheets.

Explanations regarding the collection and interpretation methodology are included in the introduction to this report. Five years of historical data are indicated for all tables with the exception of Provincial Natural Environment, Recreation and Wilderness Visitation, Table 2, which summarizes ten years of data.

Data herein have been collected by the Policy, Marketing and Research Section of Parks Branch. The Section acknowledges and appreciates the efforts of field staff throughout the park system. Without their efforts to collect, record, process and report the data summarized here, a statistical report of this quality would not be possible. The Section also thanks Operations Division - Regina Region and the Resource Policy and Economics Unit for typing support.

GLOSSARY OF TERMS

Entry Permit Terminology:

Annual Entry Permit: Permit issued upon payment to allow vehicle entry to all provincial parks and recreation sites on a daily basis for the entire park season.

Daily Entry Permit: Permit issued upon payment to allow vehicle entry to the provincial park or recreation site at which it is issued for the day.

One-Hour Permit: Courtesy permit issued to a driver of vehicle which is used to deliver goods or services to a provincial park. This permit also permits a driver to transport persons to and from institutional camps, day use areas or recreation programs within a provincial park or recreation site. Such a permit does not allow use of park facilities.

Senior Citizen's Daily Entry Permit: Courtesy permit issued to allow a vehicle which contains at least one senior citizen free daily access to provincial parks and recreation sites.

Camping Permit Terminology:

Group Camping Permit: Camping permit issued for the use of a group camping area. Use of the group area is charged by camping unit per night based on the availability of hydro at the sight. Serviced group camping areas are only available at Pike Lake and Battlefords Provincial Parks.

Regular Camping Permit: Permit issued upon payment at the park for a campsite at any provincial park or major recreation site.

Reserve-A-Site Program:	Established in 1983, the program allows campers to reserve a designated reserved campsite for their vacations at certain parks. Currently, a total of seven provincial parks and one major recreation site take reservations for campsites. (see Reservation Camping Permit).
Reservation Camping Permit:	Permit issued at the campground to those campers which use the Reserve-A-Site Program. Campers utilizing this program must pay a reservation fee to guarantee a campsite upon their arrival (see Reserve-A-Site).
Self-Registration Camping Permit:	In a self-registration campground, the onus is placed on the camper to register and pay the prescribed camping fee for the use of the campsite at a self-serve station.
Seasonal Camping Permit:	Permit issued for use of specified campsites valid for an entire summer park season (May - September inclusive)

Campground Site Definitions:

Economy Site:	A campsite located in an overflow area without standard spacing. Sites are not numbered and may not have picnic tables.
Premium Site:	A campground site which has electricity and is located in close proximity to a campground service centre.
Serviced Site:	A campsite with either electricity or reasonable access to a service centre.
Standard Site:	A campsite without electricity or access to a service centre, but includes a defined camping area with table, grill, parking or tent pad.
Discount Camping:	Camping permit issued at approximately one-third off regular rates. Discount camping is available in designated parks at designated times of the park season.

The specification of the types of sites and permits sold at individual parks and campgrounds in summarized in Appendix A.

INTRODUCTION AND METHODOLOGY

This Report is a statistical summary of the recorded use of Saskatchewan Park lands for the 1990 summer operating season including the period May 17 (Victoria Day Weekend) to September 3 (Labour Day Weekend) inclusive. All data in this Report are sorted by gazetted categories of park land. Appendix A serves as an index in locating specific data.

Tables summarizing visitation, entry permit sales, camping, program use, and designated facility use are included in this Report. A brief description of the data collection methodologies used for each category of statistics is presented below.

Visitation Statistics

Visitation estimates are derived from both vehicle count information and from actual person counts.

Vehicle count data is collected through the use of automatic traffic counters located at each Provincial Natural Environment, Recreation and Wilderness Park and at designated locations throughout the remainder of the park system. Recorded traffic counts and required estimates are provided by field staff to the Policy and Statistics Unit where they are tabulated and transferred onto a main data base. Although vehicle counts are collected at some parks during the entire year, this Report summarizes visitation figures for the summer season only.

Actual person counts are used to record visitation to Provincial Historic Parks. These data are collected by Parks Branch staff at designated Historic Parks and are included in the report.

Vehicle Count data is converted to visitation based on a multiplier of three persons per vehicle, which was derived from the 1982 Park Survey and substantiated by the 1990 Entry Gate Survey. It should be noted that the Department does not have the capability to make further adjustments to vehicle data to account for potential differences in persons per vehicle between day use and destination parks and for non-recreational users of the Park system (i.e. staff, delivery, etc.). Further field research is required to develop appropriate adjustment figures for the data currently collected on a park by park basis. At present, this data must be used in conjunction with entry permit data to determine park profiles and user trends.

Entry Permit Data

Entry permit data are accessed through the Cash Register Information System (CRIS) and the Revenue and Expenditure System (RES). Data are collected for each of the four types of entry permits issued: daily, annual, senior, and one-hour. This new information is summarized in the entry permit section below.

Camping Statistics

Camping statistics are derived primarily from data obtained from camping permits. These permits are issued via two main systems: regular and reservation permits which are issued by field staff through the CRIS system; and self-registration permits which are self-administered by campers. Shoulder season camping data is collected in an ad hoc fashion and will be tabulated in the Shoulder Season Visitation Report to be published in June.

The standard camping permit analysis provides information on camping permit days, permits issued, camper days, average size of camper group, average length of stay, camping unit usage, and origin statistics. The data are reported on a Park or Recreation Site basis. Individual campground data on designated campgrounds are available upon request.

Self-registration data are derived from campground revenue. While revenue figures allow for the calculation of permit days, and estimates for occupancy figures, further data can not be derived. It should be noted that the collection methodology for self-registration data may adversely affect the reliability of this data.

Program Statistics

Program use data are gathered by actual person counts at Historic Parks and by estimates of program participants at the remaining programs offered throughout the Park System.

Given the collection methodologies for program data, only data for Provincial Historic Park use can be considered reliable and consistent. Inclusion of other park program data provides information on program use, but remains statistically unreliable for comparison purposes.

HIGHLIGHTS

The following highlights for the 1990 summer park system use have been summarized from individual sections within this Report:

Attendance

A combination of traffic counters and entry permit sales data is used to estimate visitation across the park system. For 1990, both visitation estimates through vehicle counts and entry permit sales indicated decreases in park usage over 1989 (park system visitation estimated at 3.7M while entry permit sales (daily and annual) totalled 110,000.

In the context of other park usage information, it has been concluded that these figures do not accurately reflect park usage for 1990. Some of the reasons include: (1) entry gate hours were significantly reduced in a number of locations, thereby explaining the decrease in entry permit sales; (2) traffic count figures could not be fully verified for 1990; and (3) these data are not consistent with other park use data.

It should be cautioned that no individual statistic should be used alone to make conclusions about park visitations.

For the purposes of evaluation, it has been concluded that visitation to Provincial Parks in 1990 increased by 1.0% over visitation over the same summer period for 1989.

Campground Use

During 1989, campground usage was recorded at all twenty Provincial parks, at only 12 major recreation sites and 8 designated campground recreation sites.

In total, these campgrounds were utilized for 189,106 permit days (Table 12). This figure represents an increase of 1.0% in overall park system campground use over 1989. Seasonal camping permit days has been added for 1989 and 1990 to more accurately reflect total campground use.

Recorded data on campground occupancy increased by almost five percentage points (4.9). This overall occupancy increase is composed of an increase in recorded occupancy for all categories of park campgrounds except campground recreation sites and for all categories of campers (i.e., weekday, weekend, and holiday weekend).

Programs

A total of 82,090 participants took advantage of 2,021 specific scheduled programs offered at Provincial parks and recreation sites during 1990 (Table 69). These figures represent increases in both the number of participants (40.7%) and offered scheduled programs (24.1%) over 1989.

Program use at Historic Parks is equivalent to visitation at these facilities. A total of 214 school and "other" groups visited the four monitored Historic Parks, a decrease of 4.5% over 1989. These two groups in addition to casual visitors represented a total of 29,362 visitors at Cannington Manor, Fort Carlton, Last Mountain House, and Wood Mountain Post representing an increase in actual visitors of 4.2% (Tables 4 and 70).

PARK USE INDICATORS

PARK USE INDICATORS

The Department of Parks and Renewable Resources collects park use data in various forms in order to evaluate the patterns of use of provincial park facilities. Because it is unfeasible to count actual use of all facilities, including beach fronts, picnic sites and summer programs, the department attempts to measure attendance by use of trend statistics.

The two indicators used to evaluate changes in park system use are park visitations collected using automatic traffic counters at parks and various recreation sites; and entry permits, collected primarily from the Cash Register Information System (CRIS). Traffic count and entry permit data are not collected in all locations. However, the sum of the data provides some useful information regarding park use trends.

A. PARK VISITATION TRENDS

This section of the report analyzes summer season park visitation. Automatic traffic counters were placed at specified locations within each Natural Environment, Recreation and Wilderness Park by field staff to record vehicle counts. Due to problems with the supply of traffic counters, traffic counts were only recorded at a few recreation sites and regional parks.

The data obtained from vehicle counts were transformed into visitation estimates by multiplying the total number of vehicle counts per park by a factor of three persons per vehicle. This vehicle multiplier was obtained from the 1982 Park Visitor Survey and has been substantiated by the 1990 Entry Gate Survey. When traffic counter malfunctions occurred vehicle count data were supplemented by park field staff estimates.

In contrast, Provincial Historic Park Visitation was obtained through the use of hand counters, which tallied actual person entries. Accordingly, no conversion was necessary for Historical Park entry data.

For the purpose of this Report, all vehicle counts have been converted to visitation figures by means of the conversion discussed above. All historical data pertaining to vehicle entries at Provincial Parks, Recreation Sites (i.e. major recreation sites, campgrounds and picnic grounds) and Regional Parks have been adjusted accordingly.

Park System Year Over Year Visitation, 1989-1990

Table 1 provides a summary of gazetted park and recreation site visitation for the years 1986 to 1990. The number of traffic counters per park category is indicated in parentheses. Over 3.7 million visitors entered the park system during the summer season of 1990 at the locations monitored.

Based on the data collected, the park system witnessed an overall decrease in recorded visitation of -28.5% over the previous year.

Care is required in interpreting the percentage changes in recorded visitation as this item is not consistent with other park visitation data. **For the purposes of evaluation, it has been concluded that overall visitation to the park system increased by 1.0%.** This conclusion is substantiated by adjusted entry permit data, camping permit data and revenue estimates.

Provincial Historic Parks

Because the primary objective of a Historic Park greatly differs from a Natural Environment or Recreation Park, comparisons within the park system are difficult to make. Historic Parks are designated areas which preserve, reconstruct and interpret on-site prehistoric or historical events. Visitation to Provincial Historic Parks might best be compared to visitation to National Historic Parks or to Museums.

Recorded visitation to historic parks indicated an increase of 1.7% over 1989. Page 13 of the report provides some of the possible explanations for this year over year increase.

Regional Parks

Recorded visitation to Regional Parks indicates a year over year decrease in visitation over the previous year. It should be noted that the number of reported sites decreased as five locations did not provide vehicle count figures. However, even after adjusting the data for number of reporting sites, it is estimated that overall visitation still decreased.

Park Visitation Detail

This section of the report analyzes visitation patterns for all locations monitored within the park system.

The following tables outlined the visitation at specific parks and recreation sites over the five year reporting period.

Tables 2 and 3:	Visitation data for all Natural Environment, Recreation, and Wilderness provincial parks.
Table 4:	Number of visitors at monitored Provincial Historic Parks
Table 5:	Visitation at monitored recreation sites.
Table 6:	Visitor data for reporting campground recreation sites.
Table 7:	Monitored picnic ground visitation.
Table 8:	Visitation to monitored Regional parks.

Once again, it should be noted that all data in this report is sorted by gazetted category of park land. Exceptions to this rule have been allowed in the case where land is currently designated in a category which is inconsistent with its use. For example, Jumbo Beach is designated as a major recreation site, but also serves as an overflow campground and day use area at Makwa Lake Provincial Park. Moreover, this recreation site is located within the park boundary. As a result of this special relationship between the recreation site and the provincial park, the data is not treated independently.

TABLE 1: Number of Visitors Entering the Park System by Category, 1986-1990[a]

Category	1986	1987	1988	1989	1990	Year Over Year % Change

Footnotes:

[a] Number of visitors entering Provincial Natural Environment and Recreation Parks, Recreation Sites and Regional Parks is estimated by multiplying each vehicle entry by a factor of three persons per vehicle (1982 Park Visitor Survey). Visitation at Historic Parks is gathered by hand counter.

[b] ( ) Indicates the number of locations monitored.

Source: Traffic Count Record Sheets.

Provincial Park Visitation Detail

Natural Environment, Recreation, and Wilderness parks together experienced an overall recorded visitation decrease of 25.8% in 1990 over the previous year (Table 2). In contrast, four monitored Provincial Historic Parks reported a 1.7% increase in attendance levels over the same time period (Table 4).

In 1990 Natural Environment Parks reported 1,600,320 visitors, while Recreation Parks recorded 838,527 visitors. These statistics represent respective decreases of 26.9% and 23.1% in attendance levels in the two categories (Table 2).

Substantive Changes In Visitation Levels

Contained within the aggregate provincial park statistics are fluctuations in annual visitation levels to individual parks. These fluctuations are caused by external factors including weather and promotional events and internal factors including changes in available facilities.

In previous years, parks were expected to report changes in recorded visitation greater than 15%.

No records were kept regarding substantive changes in recorded data for 1990. Refer to the 1989 Summer Visitation Report for substantive changes to 1989 which will aid in explaining to a certain degree percentage variations to 1990 data.

Provincial Historic Parks

The nine Provincial Historic Parks of Saskatchewan preserve, reconstruct and interpret historical events on the actual site of their occurrence. Visitation data were collected through the use of hand counters at four of the Historic Parks. A total of 29,362 persons visited these four monitored locations during the 1990 summer season (see Table 4). This represents an increase of 4.2% in attendance over the previous year.

Attendance reductions at certain parks may in addition be linked with local circumstances.

The 8,994 visitors to Cannington Manor during 1990 represented a 5.9% decrease over the 1989 level. This situation may be explained in part by the reduction in the number of campers staying at Moose Mountain Provincial Park. In previous years, a substantial proportion of campers at Moose Mountain also visited this nearby Historic Park. As well, fewer casual visitors (i.e. tourists) to Cannington Manner were recorded by staff.

Fort Carlton experienced significant capital expansion to its facility during 1989 which may have affected its visitation levels. In June 1990, the new Visitor Centre at Fort Carlton opened. The new Visitor Centre drew additional visitors to the park which partly explains the 16.9% increase in visitation.

Finally, seasonal operation of the facility and the number of hours opened to the public may account for the some variation in visitation between the four Historic Parks. The dates and hours of operation for each monitored location has been listed below:

- Cannington Manor and Fort Carlton were open daily from 10:00 a.m. to 6:00 p.m. from May 21 to September 4 inclusive;

- Wood Mountain Post was open six hours a day (i.e. 10:00 a.m. to noon and 1:00 - 4:00 p.m.), except on Saturdays and Sundays during the months of May and June when the Post was closed. Hours of operation for the months of July and August were 10:00 a.m. to noon and 1:00 - 5:00 p.m. During this time period Wood Mountain Post was closed on Tuesdays and Wednesdays. This Historic Park opened on May 23 and closed after the Labour Day weekend;

- Last Mountain House was scheduled to be open daily from noon to 6:00 p.m. from July 1 to September 4 inclusive. It was closed on three days: Monday, August 6, Saturday, August 25, and September 3. In 1989, visitation on these three days totalled 352. Therefore closure of the park on the three days partly explains tthe decrease in visitation at Last Mountain House.

TABLE 4: Provincial Historic Parks: Actual Number of Visitors*, 1986-1990

Historic Parks	1986	1987	1988	1989	1990	%
Cannington Manor	14,045	12,205	11,399	9,557	8,994	-5.9

Recreation Sites Visitation - Detail

Major Recreation Sites

A total of twenty-nine Major Recreation Sites are currently gazetted under the 1986 Parks Act. In 1990 only ten major Recreation Sites were monitored due to the limited number of traffic counters. As indicated in Table 5, the 608,469 visitors to Major Recreation Sites represented a 16.7% decrease over the 1989 level or recorded visitation at seven sites.

Substantive Changes in Visitation Levels

No records were kept regarding substantive changes in recorded data for 1990. Refer to the 1989 Summer Visitation Report for substantive changes to 1989 which will aid in explaining to a certain degree percentage variations to 1990 data.

Campground Recreation Sites

Sixty campgrounds are gazetted under the 1986 Parks Act. As in previous years, only a small sample of recreation sites (three) in the province were monitored during the 1990 season. It is therefore difficult to discern trends in visitation, as any statistical conclusions must be interpreted with extreme caution (see Table 6).

Picnic Grounds

Eighty-four picnic grounds are currently gazetted under The Parks Act. Only two sites were monitored during the 1990 summer season due to the lack of traffic counters. Table 7 summarizes the available data for the years 1986 to 1990.

Regional Parks

A total of 101 Regional Parks are located throughout the province of Saskatchewan. The regional park system was established in 1960 to provide the rural population with the opportunity to enjoy recreational activities within a "reasonable" driving distance from their residence.

Regional parks are administered by individual park authorities, which are comprised of residents from municipalities within which the parks are established. The Province continues to provide local government agencies or authorities with assistance in developing recreation facilities and in meeting maintenance costs. Funds are made available through a five-year capital development agreement and a maintenance grant program.

At present, the only information collected on regional parks concerns visitation trends at minimal monitored locations throughout the province. Table 8 shows that the number of visitors to five of these regional parks is recorded at 600,636, a decrease of 43.6% over recorded information in 1989, but an increase when the data is standardized for number of sites recording. These data must be interpreted with caution, as individual regional parks show wide fluctuations in attendance levels from year to year.

Substantive Changes in Visitation

No records were kept regarding substantive changes in recorded data for 1990. Refer to the 1989 Summer Visitation Report for substantive changes to 1989 which will aid in explaining to a certain degree percentage variations to 1990 data.

B. TREND IN ENTRY PERMITS ISSUED

A total of sixteen Provincial Parks and one Major Recreation Site issue entry permits to the public. Four types of entry permits are issued for the entry and use of the park system. These four categories of entry permits are defined as follows:

- A daily permit allows the occupants of a vehicle to access the park's facilities (e.g. day use, campground areas) for the date of issue. However, daily permit data does not accurately reflect the number of daily users in the parks for the following reason. Campers are required to purchase only one entry permit, even if their stay is longer than one night. A valid camping permit allows entry to the park for the remainder of their stay.

- An annual entry permit allows the occupants of a designated vehicle access to the park system for the entire park season (summer and shoulder seasons).

- Any vehicle which contains at least one senior citizen will be issued a senior citizen's pass, which permits the occupants to enter and utilize the day use area of the park at no cost.

- Vehicles entering the park for business purposes (e.g. delivery) are issued a one-hour pass, which does not entitle the occupants to use any park facilities.

Daily and annual permit data are collected from the Revenue and Expenditure System (RES), while the Cash Register Information System (CRIS) serves as the source for the remainder of entry data. Entry permit data when used in conjunction with the visitation as estimated from vehicle counts provide an overview of usage of the park system. While this data can also be used to provide visitor profile information, this analysis must be conducted with care.

Table 9 provides a summary of entry permit sales in the provincial park system between 1986 and 1990. The total number of entry permits issued decreased by 1.2% over 1989. While this slight decrease in entry permit sales seems to support the overall decrease in estimated visitation experienced by the park system during 1990, this conclusion should be interpreted with care for the reasons outlined in the Introduction, page one.

The issuance of daily permits decreased by 3.3% of 1989 to just slightly below the five year average for daily permit sales. The issuance of annual entry permits declined again by 5.5% over 1989 continuing the downward trend in annual permit sales since the peak in sales in 1982. Seniors entry permits issued increased by 3.7% while 1-hour entry permits passes increased by 32.2% over 1989.

Entry Permit - Detail

Table 10 provides entry permit data for all locations with entry gates. Trends may be indicated by using entry permit data in conjunction with visitation data.

While both Natural Environment and Recreation Parks recorded modest decreases in total entry permits issued of -1.3% and -1.4%, sales of dailies and annuals varied between these park classifications as well as between individual parks.

Sale of dailies and annual in Natural Environment parks decreased by -5.4% and -7.8% respectively. However, the variations in sales at individual parks is quite different. Good Spirit Lake witnessed the greatest percentage increase in daily permits at 8.2% over 1989, while Meadow Lake witnessed a decrease of -12.5% over 1989.

Sale of dailies and annuals in Recreation Parks decreased more modestly than in Natural Environment parks at -0.8% and -1.7% respectively (over 1989). Again the variations between parks is large. Blackstrap witnessed the greatest percentage increases in the sales of both dailies and annuals at 11.2% and 16.6% respectively while Echo Valley witnessed the greatest percentage decreases in the sales of both dailies and annuals at -14.6% and -10.5% respectively.

PARK SYSTEM: CAMPING

PARK SYSTEM CAMPING ANALYSIS

Camping facilities are available at all Provincial Natural Environment, Recreation and Wilderness parks with the exception of Katepwa Point, which was designed solely for day-use activity. Campground data is available for all of these locations with the exception of Clearwater River Provincial Park. The camping information is not available from Clearwater River since no fees are charged for the seventeen available campsites. Accordingly, this report summarizes campground usage as recorded at twenty provincial parks during the 1990 season.

Most recreation sites also offer camping opportunities to the public. Data, where available, are reported.

The data contained in this section of the report have been sorted by type of permit (i.e. regular, reservation, self-registration and seasonal) issued at each provincial park or recreation site. Permit information reflects the method by which the permits are sold to a person(s) or group. These four categories of camping permits issued are as follows:

- A regular permit is issued to an individual or group directly upon payment for a campsite at any provincial park or recreation site.

- Any camper who uses the Reserve-A-Site Program to guarantee a campsite in advance for a specified date is issued a reservation permit for use of a designated reservation site.

- In a self-registration campground, the onus is placed upon the camper to register and pay the prescribed fee for the use of the campsite at a self-serve station. These campers issue themselves self-registration permits. Park staff conduct checks on such campgrounds to ensure compliance with proper procedure.

- A seasonal permit is issued to an individual utilizing a designated seasonal site for the entire summer.

Each permit is eligible for camping at one of the following campsite types:

Premium Site: Campsites that have both electricity and access to a service centre.

Serviced Site: A site which has either electricity or access to a service centre.

Standard Site: A non-electrified campsite.

Economy Site: A site which is in a non-designated campground area. Economy sites are usually defined as overflow or group.

This report summarizes the use of the park system camping facilities solely during the summer season, Victoria Day to Labour Day weekend inclusive.

Camping data are separated into two sections: Camping Permit Analysis, below, and Camping Occupancy Analysis, beginning on Page 63.

CAMPING PERMIT ANALYSIS

Camping data for all types of sites are obtained from a variety of sources. Regular and reservation camping permit data were derived from the actual camping permits submitted by field staff. Self-registration data were estimated from revenue records which were submitted to the Department's Commercial Revolving Fund (CRF) Unit by park staff.

For each park system category, the camping permit data have been summarized and presented for each of the following table formats: permit days, permits issued, camper days, average length of stay and average size of camper group.

Permit days should be used as the primary source of data for year over year comparisons. This is because in parks and recreation sites where self-registration permits are issued, all data other than permit-days must be estimated from this base figure.

Permit days reflect the number of campsites used in any campground. Regular and reservation permit days are derived as part of the camping permit analysis by multiplying each issued permit by the valid number of days. Self-registration permit days are estimated for each individual park or recreation site by dividing the total revenue earned by a weighted fee rate based upon the relative proportion of available site categories (i.e. premium, serviced, standard, economy, and group).

Where actual information is not available, permit days information is then used to derive camper days and campground occupancy. Camper days indicates the number of permit days multiplied by the number of campers per permit. Campground occupancy is derived by taking permit days as a percentage of available permit days.

Park System Year Over Year Camping Analysis, 1988-1989

As indicated in Table 12, camping permit days over the entire park system increased by 1.0% over 1989. Amongst the two provincial park categories, recreation park campgrounds increased by 2.6%, while natural environment park campgrounds declined by 2.4% over the previous year.

The total number of Major Recreation Site campground permit days increased by 22.3% in 1990 over 1989. Similarly, the decline in recorded permit days at Campground Recreation Site campgrounds is 20.2%.

TABLE 12: Camping Permit Days by Park System Category, 1986-1990

Park Category	1986	1987	1988	1989	1990
Provincial Parks:					
Natural Environment Parks	138,842 (11)	116,433 (11)	115,830 (11)	108,418 (11)	105,864 (11)

CAMPING PERMIT ANALYSIS DETAIL

This section of the report summarizes the campground usage for throughout the park system as follows:

Tables 13-21 summarize camping data for provincial natural environment and recreation campgrounds.

Tables 22-29 summarize camping data for major recreation site campgrounds.

Tables 30-34 summarize camping data for campground recreation sites.

Again, it should be noted that permit days data should be used for comparisons between individual campgrounds and categories of campgrounds. The remaining data is useful primarily in comparing trends in the specific park/campground of interest.

Provincial Park Campgrounds - Detail

Provincial park camping permit days (-0.6%) and permits issued (-4.3%) have continued to decline since 1986 (see Tables 13-14).

Further analysis can be conducted within the categories of provincial park campgrounds. Permit days at Natural Environment parks showed a continued to decrease (-2.4%) over 1989 while Recreation Parks witnessed a second year of increase at 2.7%.

Footnote:

[a] Total number of camping permits issued are estimated where not available by dividing the number of permit days by the average length of stay for a specific park. If the average length of stay is not available for a specific park, then the average park category (e.g. Recreational) is used instead.

Sources: Regular and Reservation Permits were obtained from the Camping Permit Analysis; Revenue Forms were used to derive Self-Registration Permit numbers.

Camper Days	789,361	663,578	647,761	618,436	628,730

Footnote:

[a] Camper Days are estimated where not available by multiplying the number of permit days times the average size of group. If the average length of stay is not available for a specific park, then the average park category (e.g. Recreational) is used instead. Camper Days are not available for seasonal permits

Sources: Regular and Reservation Permits were obtained from the Camping Permit Analysis; Revenue Forms were used to derive Self-Registration Permit numbers.

Major Recreation Site Campgrounds - Detail

Detailed statistics on individual Major Recreation Campgrounds are provided in Tables 22 through 29.

As pointed out previously, any attempt to analyze trends within Major Recreation Sites is handicapped by the low number of monitored facilities. Thus, the 22.3% increase in total permit days (see Table 22) is not necessarily indicative of the actual trend for all such Major Recreation Site Campgrounds. For example, a large part of the increase over 1989 is due to the inclusion of sesonal permit data.

The data in this section is presented as follows:

Table 22 summarizes recorded permit days at Major Recreation Site Campgrounds of all categories (regular, reservation, self-registration and seasonal). This data can be compared to permit days in other park categories.

Tables 23-28 summarize the available campground detail at the three campgrounds issuing regular, reservation and seasonal permits.

Table 29 outlines the permit days estimates for the remaining Major Recreation Site campgrounds utilizing the self-registration system.

TABLE 22: Major Recreation Site Campgrounds - Permit Day Summary, 1986-1990

Type of Permit	1986	1987	1988	1989	1990

Self-registration camping permits are issued at the Major Recreation Site Campgrounds which are listed in Table 29 below. As mentioned, at these locations, the only information which can be derived from the revenue forms is permit days. These data can then be compared to the permit day data from other park categories.

TABLE 29: Major Recreation Site Self-Registration Campgrounds - Permit Days

Major Recreation Site	1986	1987	1988	1989	1990

Footnotes: *Delaronde Lake Campground is noted as a commercially leased location. Nesslin Lake Campground leased commercially also.

Source: Revenue Forms

Campground Recreation Sites - Detail

It is not possible to analyze trends within Campground Recreation Sites owing to the limited number of monitored campgrounds. Overall recorded permit days decreased by 20.2% over the previous year. However, the number of recorded sites continues to fluctuate which makes a comparison unreliable.

Self-registration permit days have been provided in Table 34 for four other monitored campground recreation sites.

The data in this section is sorted as follows:

Table 30 provides the overview of permit days across Campground Recreation Sites.

Tables 31-33 summarize detailed campground statistics as derived for campgrounds which issue Regular permits.

Table 34 provides estimates of permit days for the Campground Recreation Sites which issue self-registration permits.

TABLE 30: Campground Recreation Sites - Permit Day Summary, 1985-1989

Type of Permit	1986	1987	1988	1989	1990
Regular	318	945	812	796	681

CAMPGROUND OCCUPANCY ANALYSIS

Campground occupancy statistics indicate the actual use of campgrounds in relation to their potential capacity. The data are divided into "weekday", "weekend", and "holiday weekend" categories for purposes of analysis. The period of coverage extends from May 18 to September 3, inclusive, with holiday weekends occurring on the following dates:

- Victoria Day Weekend; May 18 - 21
- Canada Day Weekend; June 29 - July 2
- Civic Holiday; August 3 - 6
- Labour Day; August 31 - September 3

In Tables 35 through 67, a dash indicates the inapplicability of a category to a period of time. For example, since all monitored days in September 1989 were included in the Labour Day holiday weekend, a dash appears under the categories of weekday and weekend for that month.

Summary statistics (See Table 35) indicate that virtually all categories of occupancy have increased including provincial parks and recreation sites during the monitored months. These occupancy figures do not reflect the usage of self-registration campgrounds which are enumerated in separate tables on a park-by-park basis.

Provincial Park Campground Occupancy

Campground-specific occupancy rates at the 20 provincial parks with camping data are summarized in Tables 39 to 58. Where applicable, self-registration campground occupancy has been incorporated into total occupancy. However, self-registration occupancy data cannot be derived on a monthly basis and therefore this data is only incorporated into the total occupancy figures.

The highest occupancy rates were registered at Good Spirit Lake (77.8%), Pike Lake (51.4%) and Saskatchewan Landing (47.0%).

Major Recreation Site Campground Occupancy

Campground occupancy rates at twelve Major Recreation Sites have been summarized in Tables 59 through 62. Campground occupancy figures for those major recreation sites operating on a self-registration basis have been included in Table 62. Self-registration figures were calculated using permit-day information obtained from revenue forms.

Table 60 indicates that percent occupancy at Emma Lake increased from 27.5% in 1989 to 40.3% in 1990. This returns occupancy closer to historical rates (36.8% in 1988).

Campground occupancy at Jumbo Beach increased slightly during 1990. Jumbo Beach serves as an overflow campsite area for Makwa Provincial park.

Finally, most Major Recreation Sites on self-registration recorded increases in occupancy rates during 1990.

Camping Unit Usage

This section of the report reviews the quantity and various types of camping equipment used by patrons throughout the park system in 1990.

Most percentage changes in types of camping units are insignificant. One interesting and possibly significant trend includes the increase in the percentage of tents in campground recreation sites from 12.6% of total in 1989 to 31.8%.

TABLE 68: Summary of the Various Types of Camping Equipment Reported by Park System Category, 1989-1990

PARK SYSTEM: PROGRAMS

PARK VISITOR PROGRAM STATISTICS

This section of the Report presents information on leisure activities carried on throughout the park system, including interpretive (e.g. visitor centres), instructional (e.g. swimming lessons) and recreational (e.g. nature trail hiking, pool facilities) programs. Program attendance at Provincial Historic Parks is measured through the use of hand counters, thus allowing for the comparison of the data. Statistical reporting procedures for participation levels at other provincial parks and major recreation sites have changed during the past decade, causing inconsistencies in the data base at the individual park level. Parks Branch anticipates that the collection of program statistics will proceed in a more consistent manner in future, in order to facilitate computer analysis.

In 1990, computer analysis was used for the first time. It should be noted that there may have been some double counting which may have lead to minor over-estimates in actual visitation.

Park Programs

Participation data for programs offered at Provincial Natural Environment, Recreation and Historic Parks, as well as Major Recreation Sites are summarized in Tables 69 through 73. The nature of the programs vary with each category. For example, Provincial Park and Major Recreation Site programs entail scheduled activities which are available to park visitors, ranging from water safety demonstrations and guided nature hikes to evening campfire presentations. Since participation in these programs is recorded at each event individually, participants may be recounted if they partake in more than one program.

In contrast, Historic Park Programs are carried out continuously during the hours of operation. The number of program participants is therefore equal to the number of daily visitors. Special programs are offered to visiting school groups. Because of these differences, Historic Park participation figures should not be added to other program use statistics.

Provincial Park System Programs by Park Category

Table 69 summarizes program and participation levels at individual Provincial Parks and Major Recreation Sites for 1989 and 1990. "School" programs are offered to students who participate in a specific program as part of a school group visit. "Other" programs are arranged on request for groups other than schools. "Casual" programs refer to other programs which are designed for all park visitors. All park categories with the exception of major recreation sites recorded increases in the number of programs and participants during 1990.

Provincial Historic Park Programs

In 1990, 29,362 visitors participated in programs offered at the four monitored Provincial Historic Parks (Table 70). This represented an overall increase of 4.3% over the previous year. Tables 71 and 72 provide more detailed information on "school" and "other" group participation in Historic Park Programs during 1989 and 1990.

Fort Carlton experienced significant capital expansion to its facility during 1989 which may have affected its visitation levels. In June 1990, the new Visitor Centre at Fort Carlton opened. The new Visitor Centre drew additional visitors to the park which partly explains the 16.9% increase in visitation.

TABLE 70: Number of Programs and Participants by Visitor Type Offered at Historic Parks, 1989-90

Instructional Programs at Natural Environment and Recreation Provincial Parks

Red Cross Instruction Swimming

Table 73 presents data on Red Cross instructional swimming offered in both provincial park categories. Each person received five swimming lessons, lasting from 30 to 45 minutes, on five consecutive weekdays. Anyone enroling for a second set of lessons would be numerated a second time.

Red Cross swimming lessons were offered at six Natural Environment and six Recreation parks during 1990. The 3,894 persons enroled represent a 2.3% increase over the previous season.

Royal Life Saving Instructional Programs

These programs were offered along with the Red Cross lessons, involving for the most part individuals who participated in the latter programs. Royal Life Saving Instructional Programs were available at five Natural Environment and five Recreation parks. A total of 204 persons were enroled, an increase of 14.0% over the previous year.

Selected Facility Use Data

Facility use at selected beach fronts, pools and interpretive/visitor centres has been summarized in Tables 75 through 78.

Weekly Waterfront/Pool Use Summary

Table 75 indicates the cumulative total of people counted by park staff at waterfront and pool areas, recorded during a specified time during each morning and afternoon throughout the operating season. These figures provide only a rough estimate of facility use, as counts were affected by the availability of park staff. Pool admission ticket figures were obtained from CRIS.

Although Table 75 provides only a rough estimate of facility use, it is interesting to compare beach front and water counts among the three park system categories. The total number of people using beach facilities at Natural Environment Parks declined by 32.6% over 1989 while beach counts at Regina Beach also decreased by 43.9%. In contrast, Recreation Parks reported an increase of 56.5% over 1989. In 1990, a total of 47,091 people were counted at the three pools, representing a 3.3% increase over the previous year.

Interpretive/Visitor Centre Statistics

Hand counts and guest book signatures are used to compile the data contained in Table 78. The method of gathering information differs among facilities, as do hours of operation. 67,632 visitors visited the Interpretive and Visitor Centres in 1990 at the nine locations listed, a decrease of 6.6% over the previous year.

PARK SYSTEM: FIXED ROOF ACCOMMODATION

FIXED ROOF ACCOMMODATION

In 1990, the only provincially owned and operated fixed-roof accommodations were located at Greenwater Provincial Park. Table 79 provides a five year comparison of the overall summer accommodation occupancy rates on a monthly basis. The highest percentage occupancy of the Greenwater fixed-roof facilities occurred in July (98%) and August (85%). A detailed breakdown of occupancy data by specific type of accommodation is presented in Table 80.

TABLE 79: Greenwater Provincial Park: Monthly Percentage Occupancy*, 1986-1990

PARK SYSTEM: GOLF

GOLF

Table 81 summarizes the number of 9-hole rounds of golf played at various provincial parks throughout the province over a five year period. By 1990, four out of the five provincial park golf courses have been leased to the private sector.

At Greenwater Lake Provincial Park, 5,000 9-hole rounds of golf were played in 1990. No other data are available.

PARK SYSTEM: COMMERCIAL AND COTTAGE LEASES

COMMERCIAL AND COTTAGE LEASES

Commercial and Campground Leases

Tables 82 to 83 summarize the number of leases issued to private individuals allowing them to operate commercial facilities and campgrounds within the park system. A total of 78 summer commercial leases were issued for the 1990 season, including, for example, stores, fast food services, boat rentals, riding stables and miniature golf courses.

Commercial leases are also issued to private individuals who wish to operate campgrounds owned by the Department. At present the only provincial park leased campground is Lac Des Iles South at Meadow Lake. Table 83 lists the various Recreation Site campgrounds which were leased for the 1989 and 1990 seasons.

Cottage Leases

Table 84 indicates the number of leases issued to cottagers for cottage subdivision lots within provincial parks. Moose Mountain and Duck Mountain Provincial Parks accounted for one third of all cottage leases.

APPENDICES

APPENDIX A - CAMPGROND CLASSIFICATION

Appendix A classifies and categorizes all major park land and campgrounds owned and either administered by the Department or operated through a lease agreement with a private entrepreneur. The data reflects the park season status as at 1990. Park Superintendents will be responsible for notifying the Policy and Statistics Unit of any changes in, for example, campground sites and classification during each park operating season.

This document was compiled from two inventory lists obtained from Contract Services Branch and Parks Branch. In addition, Park Superintendents were asked to review this document and indicate any changes in provincial park, major recreation site or campground recreation site information which fell under their jurisdiction. This document will be updated on an annual basis and will serve as the Department's sole inventory list.

As in the previous report, Appendix A continues to identify which provincial parks and major recreation sites require the public to purchase entry permits in order to gain access to their day-use and campground facilities. This year, Appendix A has been expanded to incorporate information on the total number of camping sites, type of campsite (e.g. premium), and type of permits issued (e.g. regular, reserve) at provincial parks, major and campground recreation sites. For example, The Battlefords Provincial Park has a total of 502 sites, of which 101 are designated as premium, 164 as serviced, 78 as standard, 102 as economy and 57 as group camping sites. All campers are issued a regular permit at this park, and data for each individual campground is provided.

The emphasis in this year's appendix has been placed upon the provincial park system, and every effort has been made to provide accurate and comprehensive statistics. In future, the Policy and Statistics Unit hopes to provide data of a similar quality for major recreation sites and campground recreation sites.

Park Category	Region	Camping Type
R = Recreation	S.C. = Swift Current	Reg. = Regular
H = Historic	P.A. = Prince Albert	Self = Self-registration
NE = Natural Environment	N.B. = Hudson Bay	Res. = Reserve-A-Site
W = Wilderness		Seas. = Seasonal

Footnotes:

* At present no camping fees are charged. Location of star indicates what type of campsite rate might be charged in the future.

\+ Exact number of campsites, especially those located in overflow and group campground areas are not clearly defined.

a Reservation permits wre issued for these sites between June 29 and August 6, 1990, inclusive.

b Jumbo Beach is considered as part of Makwa Lake Provincial Park for operational purposes, even though it is classified as a separate major recreation site. Jumbo Beach serves as the primary day use area (i.e. beachfront) for Makwa Lake and provides a secondary campground function as well.
